Mikron/IQMS Sign Multi-Plant Partnership Agreement

Mikron Plastics Europe and IQMS have signed an agreement for IQMS to provide an ERP system for up to six facilities in Europe and Asia. Swiss based Mikron services a variety of industries including medical and automotive markets.

The first site will be installed in Nidau, Switzerland beginning in July 2003. This facility focuses on the medical market and will be implementing most of the products offered by IQMS, including the Quality Management module. "We were looking for a product that was integrated, easy to use and could support our diverse needs," said IT Director Rune Paulsen of Mikron. IQMS was selected after a lengthy search because of "the proven technology and commitment demonstrated by the IQMS organization" he concluded.

The Swiss installation will mark the fourth plant using EnterpriseIQ from IQMS. Other sites include plants in Rochester New York, Anderson South Carolina and Vianen, The Netherlands. Future expansion is slated to include sites in Italy, England, Czechoslovakia and optionally China.

"We couldn't be more thrilled" stated Terry Cline, IQMS Vice President. "Mikron has been a wonderful customer and user of our system for several years, and we are honored to be selected to service the balance of their facilities." Cline indicated that IQMS would be supporting language specific versions of the system as required.

About IQMS

Since 1989, IQMS has been a pioneer in the design and development of enterprise software (ERP) for repetitive and discrete manufacturing industries. With offices across North America and Europe, IQMS is the #1 enterprise software developer for the worldwide plastics industry and meets the needs of manufacturers in the automotive, medical, appliances, construction, housewares and other industries. IQMS delivers a complete ERP solution, EnterpriseIQ, which provides a wealth of business management functionality previously available only through multiple vendors. Only EnterpriseIQ uses a single database to integrate manufacturing and accounting with a suite of modules, eliminating the need for interfacing third-party add-ons. IQMS stands 100% behind all products and services, offering a one-year full money back guarantee, free upgrades, expert support and implementation resources, and ongoing research and development. Visit www.iqms.com for more news & information about IQMS.

About Mikron Plastics Technology Division

The Plastics Technology division focuses on the engineering and building of injection molding tools for the production of plastic components and the subsequent assembly of these components to subsystems, e.g. fans for aeration systems, gear drive systems, film cartridges, inhalers, etc. Visit www.mikron-tg.com/divisions/division-plastics-technology.htm for more details about Mikron Plastics Technology Division.
